The REMODEL toolkit **IS NOW ONLINE!**

13. November 2018

We are extremely excited to launch the REMODEL Toolkit; a design-sprint toolbox that enables any company to harness the power of open source principles to build new business models.

Agnete Schlichtkrull

In the Spring of 2018, 8 Danish manufacturing companies went through the REMODEL programme. Now, we've published the toolkit for anyone to use. Especially manufacturers of hardware can take advantage of this new resource to radically rethink how they innovate and scale
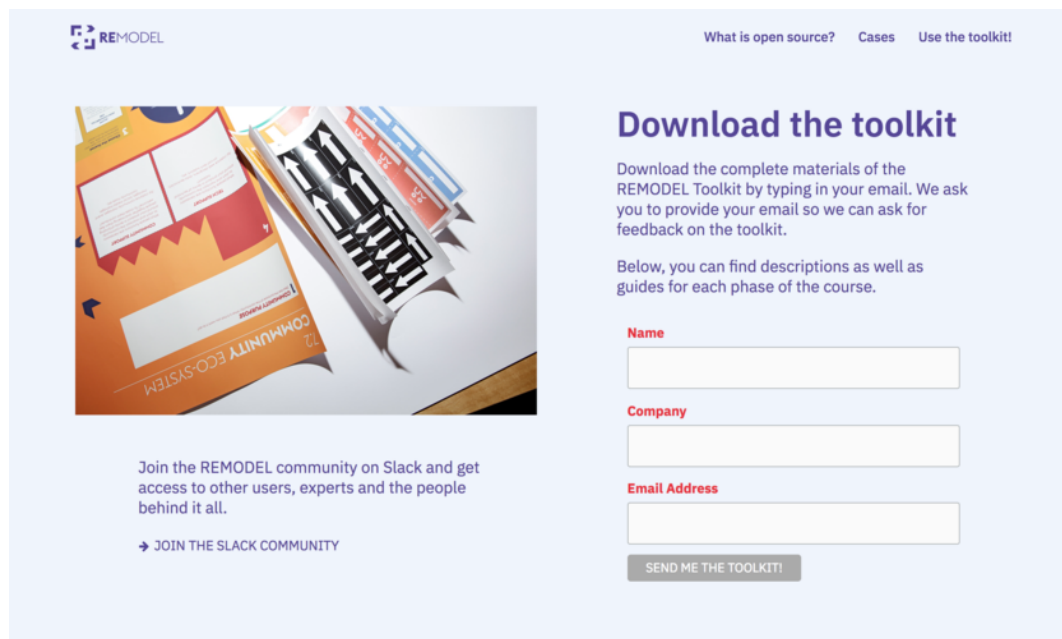

their business through open source.

The toolkit contains guides, video tutorials and a peer to peer support forum which allows a company to not only fully direct their own transformation journey, but also to do so from their own location. Moreover, it contains business cases of the 8 companies that went through the original REMODEL program.

Explore the toolkit now
You can find the toolkit on remodel.dk. We would love to hear from you with comments, suggestions and ideas – either by contacting Christian Villum at Danish Design Centre on cvi@ddc.dk or in the Slack forum we have set up for the toolkit (you will find a link for that in the toolkit - or can join directly by going here).

Check out the toolkit at remodel.dk!

An open source toolkit for open source innovation
The entire toolkit itself is, of course, open source: It is published under one of the most open and liberal licenses

available, namely the Creative Commons Attribution-
ShareAlike (CC BY-SA) license. In other words: Please take
what we've made and make it your own, build on it, share it,
sell it – do whatever you want with it. All we ask is that you
mention where the originals came from (including credits to
those third-party works who we've built some of our
elements on). This is our way of building assets that will
continue to pay value forward to coming generations of co-
creators.

REMODEL
